

DIGITAL GRADING IN ONE SOLUTION

Software x **Accuratech**
ACCURATE TECHNOLOGY
Hardware x **scanvaegt**
systems

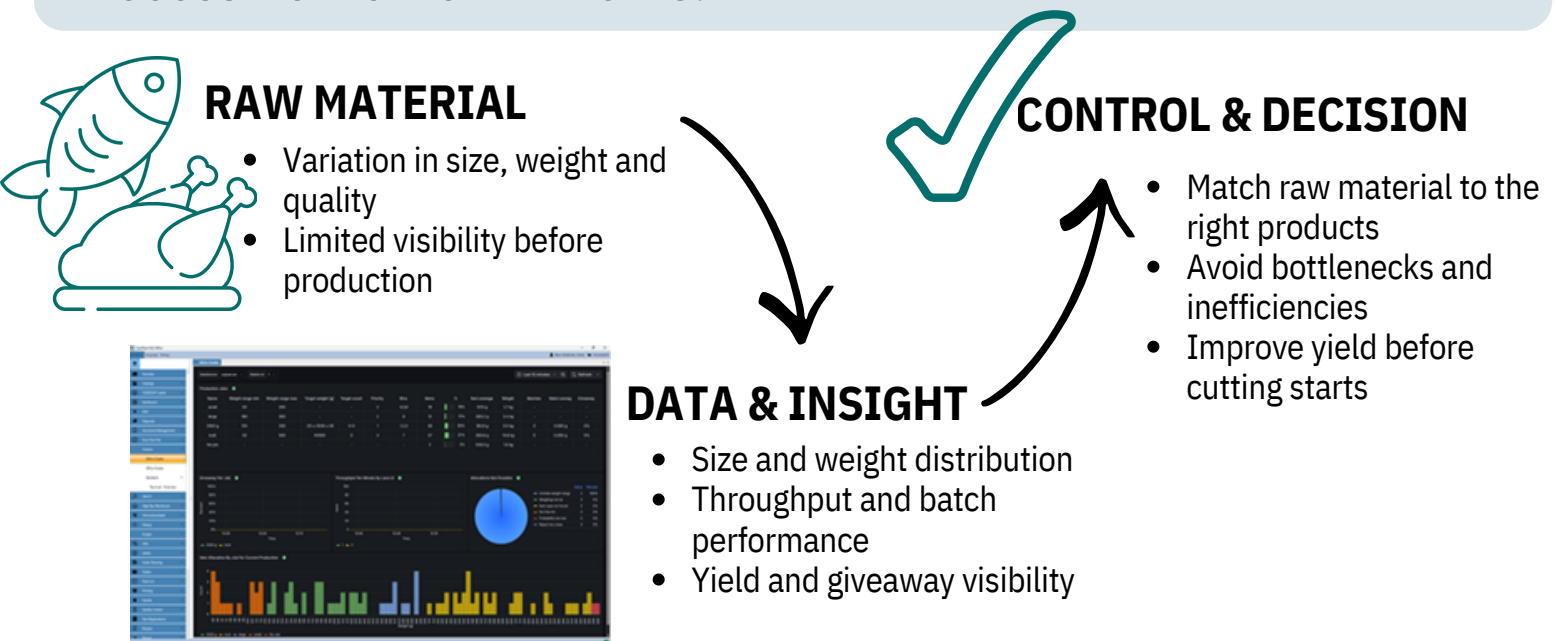

FROM RAW MATERIAL → TO FULL VISIBILITY

Do you really know your raw material before production starts? Inconsistent raw material can lead to poor planning, bottlenecks and lost yield in food production. Digital grading gives you full insight into your raw material before processing begins helping you make better decisions from the very start.

We created one integrated solution combining hardware from Scanvaegt and software from Accuratech.

- Hardware, SB520 Grader, weighs and classifies each product, capturing accurate data on size, weight and batch distribution.
- Software, ScanPlant NG, provides real-time dashboards and reports on throughput, giveaway, batch sizes and performance.
- Combined value: One integrated solution that gives full insight into raw material and enables better planning, higher yield and fewer production losses.

Process flow & how it works:

Key benefits:

- **Full insight into raw material**
Understand size, weight and batch distribution before processing begins.
- **Better production planning**
Match raw material to the right products and avoid downstream bottlenecks.
- **Real-time performance visibility**
Monitor throughput, giveaway and batch results as they happen.
- **Data-driven optimisation**
Use real-time and historical data to improve batching and overall efficiency.
